EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Armina E. Matthews, Esq. on June 24, 2004. Applicants reserve the right to file a continuing application(s) to seek coverage for invention embodiments cancelled hereinbelow.

The application has been amended as follows:

IN THE CLAIMS:

At claim 1, line 2, following "solids" insert – wherein said one or more particulate solids includes a peracid --;

line 3, following "system" insert – wherein said polymeric stabilization system comprises a polymeric compound selected from anionic polyterephthalate polymers –

Cancel claims 2, 4, 5 and 14-19.

2. The following is an examiner's statement of reasons for allowance:

Claims 1, 3 and 6-13 directed to the subject aqueous liquid detergent composition comprising a particulate peracid including phthaloylamido

Art Unit: 1751

peroxycaproic acid (PAP) and an anionic polyterephthalate polymer as defined in the instant specification at p. 14, paragraphs 2 and 3 wherein US Patents 4,702,857 and 5,415,807 to Gosselink and Gosselink et al, respectively, and US Pat. 4,968,451 to Scheibel et al are relied on as defining these polymers... see also p. 71, Example 2, Compartment 2 re polymer described in the Scheibel et al '451 patent, refinements thereof and related method of use for laundering fabrics are deemed allowable over the prior art of record, the most pertinent of which are US Pat. 4,992,194 to Liberati et al and WO 98/00504 to Dovey et al/The Procter & Gamble Company, in that this art does not disclose or suggest, individually or in combination, the subject composition or method of use defined by these claims. The Liberati et al '194 reference discloses an aqueous based stably suspended organic peracid such as PAP (col. 3, line 48 et seq) but is silent as to the anionic polyterephthalate polymer component. The Dovey et al '504 reference discloses that the bleach precursors components can be partially replaced by preformed peracids such as PAP (see p. 8, paragraph 2) and does disclose incorporation of polymeric soil release agents such as described in the Scheibel et al 4,968,451 patent (see p. 39, last paragraph) but in the context of a solid bleach precursor composition. Claims 1, 3 and 6-13 stand allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

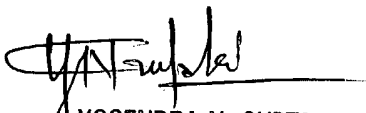

Art Unit: 1751
